deeplearning.ai

- 1. Identify a misspelled word
- 2. Find strings n edit distance away
- 3. Filter candidates
- 4. Calculate word probabilities

4. Calculate word probabilities

4. Calculate word probabilities

Example: "I am happy because I am learning"

Word	Count
I	2
am	2
happy	1
because	1
learning	1

4. Calculate word probabilities

Example: "I am happy because I am learning"

Word	Count
I	2
am	2
happy	1
because	1
learning	1

4. Calculate word probabilities

Example: "I am happy because am learning"

W	ord	Count
	I	2
а	ım	2
ha	рру	1
bec	ause	1
lear	ning	1

4. Calculate word probabilities

Example: "I am happy because I am learning"

Word	Count
I	2
am	2
happy	1
because	1
learning	1

4. Calculate word probabilities

Example: "I am happy because I am learning"

$$P(w) = \frac{C(w)}{V}$$

P(w) Probability of a word

C(w) Number of times the word appears

V Total size of the corpus

Word	Count
Ι	2
am	2
happy	1
because	1
learning	1

Calculate word probabilities

Example: "I am happy because I am learning"

$$P(w) = \frac{C(w)}{V}$$

$$P(w) = \frac{C(w)}{V}$$
 $P(am) = \frac{C(am)}{V} = \frac{2}{7}$

Probability of a word

Number of times the word appears

Total size of the corpus

Word	Count
I	2
am	2
happy	1
because	1
learning	1

4. Calculate word probabilities

deeplearning.ai

Minimum edit distance

- How to evaluate similarity between 2 strings?
- Minimum number of edits needed to transform 1 string into the other
- Spelling correction, document similarity, machine translation, DNA sequencing, and more

Edits:

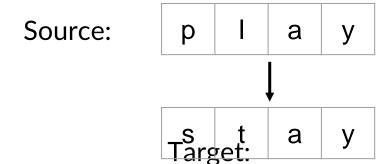

```
Insert (add a letter) 'to': 'top', 'two' ...
Delete (remove a letter) 'hat': 'ha', 'at', 'ht'
Replace (change 1 letter to another) 'jaw': 'jar', 'paw',
```

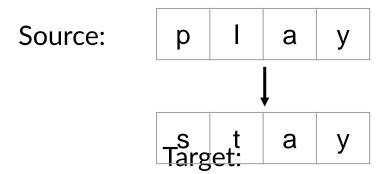

Example:

Source: p I a y

Example:

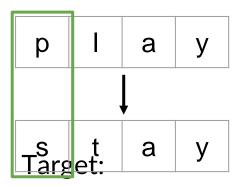

Example:

What is the minimum number of edits to make this happen?

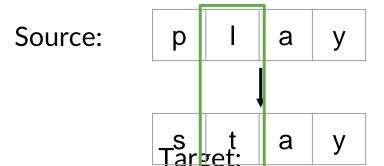

Example:

Source:

 $p \rightarrow s$: replace

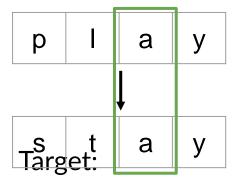

Example:
